Overall sequence quality assessment and vector trimming were conducted using the Lucy software (http://www.tigr.org/softlab/s). Lucy parameters were set to ensure an overall trimmed quality of 9.3% or better without any vector fragments in the chosen high-quality region of each sequence. Low-quality bases between the poly-T and the high-quality region were replaced with N's to serve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              reculting DNN:RNA hybrid was treated with RNase H and used as a template for DNA Poll-Catalyaced second strand synthesis. After the addition of EcoRI adaptors, the ds.cDNa were digested with NotI and size-selected. The reculting molecules were directionally cloned into the EcoRI and NotI safe the pT773PAC vector. The library

                                                                                                                                                                                                                                                                     The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPe are derived from human HeLa cells. The SENPe can be used to produce a single exon microarray, which can be used for mesuring human agene expression in a sample derived from human cervical epithelial cells. By mesuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at firs, wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  99

                                                                                                                                                                                                                                                                                              The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases in the human particularly those diseases with polygenic actiology. The diseases include: breast cancer, discorders of development, inflammatory diseases of the breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ATGGACAATTGGCGCCAGAACACACAGCTGAGCAAGAGGCCCTCCAAGCCAAAGTTGAT 120
